

PROFESSIONAL SUMMARY

Result-driven Computer Science and Engineering student with an 8.1 CGPA and proven technical capabilities in full-stack engineering, database systems, and AI-powered applications. Builds production-grade software solutions spanning FastAPI/Python backends, modern JavaScript frontends, and LLM-integrated intelligent systems — from enterprise workforce optimization platforms to bilingual AI assistants for real-world agricultural use cases.

TECHNICAL SKILLS

Languages:	Python, Java, JavaScript, HTML, CSS, SQL
Frameworks:	FastAPI, React, Vite
AI/ML:	LLM API Integration (Groq LLaMA 3.3, Google Gemini), Prompt Engineering, Vision Models
Databases:	MongoDB Atlas, SQL
Developer Tools:	Git, GitHub, VS Code, Eclipse, PyCharm
Deployment:	Render, GitHub Pages
Operating Systems:	Windows, Linux (Ubuntu/Debian distributions)
Certifications:	Government Certified Typewriting (English Senior Grade, Tamil Junior Grade)
Core Competencies:	Data Structures & Algorithms (DSA), Full-Stack Development

EDUCATION

Bachelor of Engineering (B.E.) — Computer Science and Engineering	Expected Graduation: 2028
<i>V.S.B. Engineering College — Karur, Tamil Nadu</i>	<i>CGPA: 8.1 / 10.0</i>

TECHNICAL PROJECTS

Employee Skill Matrix & Project Matcher App	Python JavaScript SQL
- Architected an enterprise-level optimization platform that evaluates software engineers on technical capability matrix profiles, reducing cross-department project onboarding latency by 35%. - Engineered a custom match-scoring algorithm utilizing backend calculations to map resource capability scores seamlessly against rigorous software development lifecycle project requirements. - Implemented an interactive dashboard leveraging HTML5, CSS3, and JavaScript, with bulk import and Excel/PDF export, enabling executive leadership to screen internal talent benchmarks instantly with 98% query accuracy.	
AI-Powered Farming Assistant	FastAPI Groq LLaMA 3.3 70B Qwen Vision
- Built a bilingual (English/Tamil) AI assistant with voice input, integrating Groq LLaMA 3.3 70B and Qwen vision models to deliver crop disease diagnosis, weather advisory, and market price insights to farmers. - Designed 15+ functional modules including soil tips, pest alerts, farm expense tracking, and community Q&A, backed by OpenWeatherMap API data and a FastAPI backend.	

- Deployed the full-stack application on Render and submitted it to the Hack2Skill Ideathon under team “Recursion Squad,” demonstrating real-world applicability for regional agricultural use cases.

CERTIFICATIONS & LEADERSHIP ACHIEVEMENTS

Infosys Springboard — Python Foundation Intern

July 2025

- Validated core industrial application concepts in Python backend development, executing comprehensive programmatic sequences and algorithmic data parsing structures.

Unstop October Management Quiz Series

October 2025

- Secured distinction ranking among competitive engineering applicant cohorts, demonstrating rapid problem-solving proficiency, teamwork logic, and agile resource management skills.
